

User Guide

Below is a list of steps to follow in order to run the Product successfully:

1. Download the Anaconda software. If this has not already been downloaded, it can be downloaded here: <https://www.anaconda.com/download>.
2. Download and save the “Machine Learning Project” ipynb file to your local computer.
3. Start the Jupyter Notebook software that is included with the Anaconda download. This can be done by clicking on the windows button, searching “Jupyter Notebook”, and running the application.
4. The application should first present files that mirror what is stored on your local computer. Navigate to where you saved the “Machine Learning Project” ipynb file and open the file.
5. Once the file is open, you will want to click the following button near the top of the screen:

This will ensure the Product functions properly. Once you click this button, you will be asked whether you want to restart the kernel and run all cells:

Click the “Restart and Run All Cells” button.

6. Enjoy the Product!
